Discover how Oxfordshire is an engine for innovation

INVEST IN A DYNAMIC ECOSYSTEM WITH UNLIMITED POTENTIAL

Harwell Campus in Oxfordshire, one of the world's leading science and research centres and one of the UK's Life Sciences Opportunity Zones

Courtesy of Harwell Campus 2019

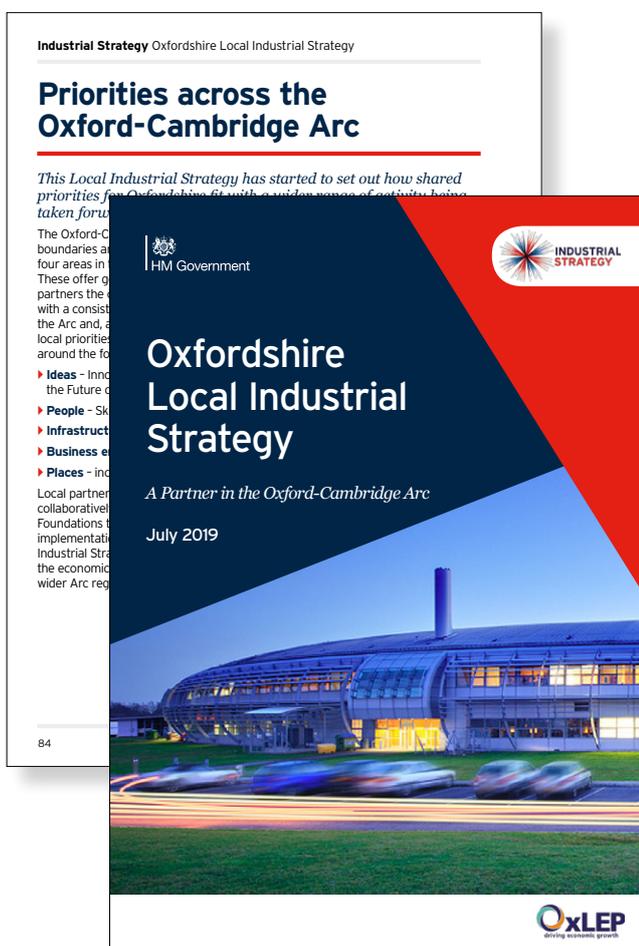

10 REASONS TO CHOOSE OXFORDSHIRE

1. Part of the UK's 'Golden Triangle' of economic growth and innovation
2. Skilled workforce with 50.5% educated to equivalent of degree level or above¹
3. Easy access to leading experts working at some of world's greatest research centres
4. Opportunity to collaborate with exciting spin-outs from the University of Oxford
5. Existing ecosystems at life science hubs facilitate exchange of knowledge and access to facilities
6. Availability of Grade A office and lab space for businesses of all sizes, providing scalability
7. Existing infrastructure to support delivery of clinical trials at world recognised centres of excellence
8. Excellent connectivity to London and other core cities through rail and motorway network
9. Universities and other educational institutions with a focus on health and life sciences provide a steady stream of talent
10. One of the world's leading innovation hubs with first class connections to other global centres through nearby airports

¹ Labour Market Profile 2018, ONS

A GLOBAL HUB OF LIFE SCIENCES INNOVATION

Oxfordshire is one of Europe's most successful Life Sciences clusters with a track record in establishing and attracting world leading life sciences businesses.

- Home to the [University of Oxford](#), Oxfordshire is part of the UK's 'Golden Triangle', forming an area of significant economic growth and expertise in Life Sciences and Health, alongside Cambridge and London.
- The cluster of Life Sciences and Health companies in Oxfordshire provides a critical mass that spurs innovation through extensive multidisciplinary collaboration.
- The [Oxfordshire Local Industrial Strategy](#) positions the county as one of the top-three global innovation ecosystems. It highlights Oxfordshire's world-leading science and technology cluster and its unsurpassed potential to be a pioneer for the UK through its emerging transformative technologies and sectors.
- The [Oxford-Cambridge Arc](#) will leverage the opportunity for collaboration between the two key economic areas, drawing on their scientific expertise to deliver growth and prosperity.
- Foreign owned companies who have expanded or established operations in Oxfordshire during the last three years include [Novo Nordisk](#), [Intuitive Surgical](#), [Abbott Diabetes Care](#), [Oxitec](#) (part of [Precigen](#)), [Evotec](#), [Sysmex](#), [Agilent](#) and [Vertex](#).

CONNECTING YOU

LOCAL AND GLOBAL

SETTING GLOBAL STANDARDS IN ACADEMIC RESEARCH

World leading research and teaching provide the ideas and talent to develop ground-breaking new technologies and a global powerhouse for clinical trials.

The Oxfordshire cluster spans a whole range of life sciences enterprise including drug discovery and development, diagnostics, medical devices, digital health, regenerative medicine, precision medicine and genomics.

The University of Oxford [Medical Sciences Division](#) run one of the biggest clinical trial portfolios in the UK. The University sponsors over 1350 academic designed and research led studies both within and outside the EU.

The University has six fully registered [UK Clinical Research Collaboration \(UKCRC\)](#) clinical trials units working in partnership with [Oxford University Hospitals Foundation NHS Trust](#) and [Oxford Health Foundation NHS Trust](#).

Incoming businesses can benefit from Oxfordshire's exciting and highly successful array of university spin-outs, and the potential for collaboration. Several of the region's fastest growing companies have grown out of the world leading research of the University of Oxford.

THE UNIVERSITY OF OXFORD IS RANKED NO. 1 UNIVERSITY IN THE WORLD

The institution has been top of the Times Higher Education World University Rankings for four successive years

INNOVATION CLUSTERS ACROSS OXFORDSHIRE

The county is home to numerous clusters and communities, providing the ideal environment for collaboration across multiple disciplines, including:

- Old Road Campus
- John Radcliffe, Nuffield & Churchill Hospitals Quarter
- Milton Park
- Oxford Science Park
- Begbroke Science Park
- Science Vale Enterprise Zones
- Harwell Campus
- Oxford Technology Park

In addition to existing hubs, new sites have been identified across Oxfordshire for further development, including:

- Osney Innovation District
- West Oxfordshire Garden Town Science Park
- Oxford North

OUR LIFE SCIENCES COMMUNITY INCLUDES

LEADING ADVANCES IN...

DRUG DISCOVERY AND DEVELOPMENT

Therapeutics R&D is at the heart of Oxfordshire's life science industry, supported by a group of world-class contract research and manufacturing organisations.

International biopharma companies with a long-standing presence in the region include [Amgen](#), [Aptuit](#), and [Jazz Pharmaceuticals](#).

[Vertex Pharmaceuticals](#) is a global US owned biotechnology company which aims to discover, develop and commercialize innovative new medicines for the treatment of autoimmune disorders and cancer. It established its first international R&D site at Milton Park in 1998 and has continued to expand its presence in Oxfordshire.

[Ipsen Bioinnovation](#) is home to the French pharma company's UK R&D functions with about 100 employees at Milton Park, including researchers devoted to neuroscience alongside other R&D professionals.

The [University of Oxford](#) has world class drug discovery capabilities with particular specialisms in [antibiotics](#), [cancer](#) and [cardiovascular disease](#). The Target Discovery Institute is a major cross discipline collaborative initiative that draws together expertise of research staff across the university.

The new £77m [Vaccine Manufacturing Innovation Centre](#) in Oxfordshire will become the first-ever facility dedicated for the development and manufacturing of vaccines in the UK and will be fully operational at [Harwell Campus](#) by 2022. The centre is a joint development of three academic institutions, namely the [University of Oxford](#), [Imperial College London](#) and the [London School of Hygiene and Tropical Medicine](#). It is also supported by leading pharmaceutical and healthcare companies including [MSD](#), [Johnson and Johnson](#) and [GE Healthcare](#).

[The Rosalind Franklin Institute](#) is a new national institute, funded by the UK government through UK Research and Innovation (UKRI). Focused on [five complementary themes](#), new technologies will produce insight that will speed up drug design and development, and push forward our understanding of human health and disease. The Institute has chosen [Harwell Campus](#) as its [central hub](#) and will house a unique portfolio of scientific tools and researchers from both industry and academia.

Key CROs and CMOs operating in Oxfordshire include [Evotec](#), [ICON](#), [Eurofins](#), [Ludger](#) and [Patheon](#) and benefit from Oxfordshire's easy access to lab personnel and proximity to key transport hubs.

LEADING ADVANCES IN...

PRECISION MEDICINE AND GENOMICS

Oxfordshire is at the forefront of developments in the rapidly evolving fields of precision medicine and genomics.

The recently launched Nucleic Acid Therapies Accelerator (NATA) is a new national research initiative based at Harwell Campus. Its mission is to unlock the potential of precision genetic medicines and accelerate the development of nucleic acid (NA) therapies. The initiative will capitalise on the UK's industrial and academic base to accelerate new therapies, within a state-of-the-art facility.

The University of Oxford is leading global efforts to define, classify and understand disease at the molecular level. It is home to world-renowned academic centres and institutes investigating genomic medicine and clinical genetics such as the [Wellcome Trust Centre for Human Genetics](#) and the [Big Data Institute](#).

The strength of this research - together with the exceptional data resource available from initiatives such as the [Oxford Radcliffe Biobank](#), [UK Biobank](#), [100,000 Genomes](#) and [Dementias Platform UK](#) - is attracting intense interest from the biopharma and healthcare sectors, and has given rise to a number of prominent spin-out companies.

Oxford Genome Sciences (UK) based in Oxford owns the Oxford Genome Anatomy Project (OGAP™), the world's largest proteomics database to date, comprising over one million peptide sequences from 50 different tissues involved in 60 different diseases.

[Oxford Gene Technology](#) (OGT), recently acquired by Japanese-owned company [Sysmex](#), provides genetics research solutions to leading clinical and academic research institutions. Based at Oxford University's [Begbroke Science Park](#), OGT has developed a class-leading product portfolio in molecular genetics and next-generation sequencing (NGS) sample preparation. The company has customers in over 60 countries.

Other companies include [Oxford Cancer Biomarkers](#), [Adaptimmune](#) which is focused on the use of T cell therapy to treat cancer and [Cellmark Forensic Services](#) (a genotyping and DNA analysis company).

Opening in 2021 the Institute of Developmental and Regenerative Medicine will bring together over 200 researchers and specialists in cardiology, immunology and neuroscience. Currently under construction at Old Road Campus, the new £35m centre aims to improve understanding of normal biological development and apply this learning to help deliver advanced therapies that can repair the damage caused by a range of debilitating diseases.

[OxStem](#) is a regenerative medicine drug discovery company spun out for Oxford University developing small molecule drugs that can activate repair mechanisms that already exist within the body. The company which raised a record £16.9m in funding in 2016 has already launched 6 subsidiaries each focused on an largely unmet therapeutic need: cardiac failure, neurodegenerative diseases, macular degeneration, diabetes and chronic inflammation and wound healing.

LEADING ADVANCES IN...

MEDICAL DEVICES AND DIAGNOSTICS

There is outstanding capability in the medical devices and diagnostics sector in Oxfordshire. This provides excellent opportunities for investors to access the necessary skill and research base available and is reflected in the number of medical device companies with operations across a range of R&D, sales and service, and manufacturing activities.

Diagnostic imaging has a considerable presence in the area. [Siemens](#), the leading global engineering and technology services company has a key manufacturing base in Eynsham, where it designs and manufactures the superconducting magnets for all Siemens magnetic resonance imaging (MRI) scanners worldwide.

[Owen Mumford](#) specialises in self-injection and blood sampling devices. Headquartered in Woodstock and employing over 500 people, the company exports over 90% of its products. Other companies manufacturing in the region include [Penlon](#) and [Ability Technology Group](#).

[Abbott Diabetes Care](#), part of US owned medical company Abbott, has its Global Centre of Excellence for Medical Devices in Witney, where over 600 people are employed.

[Oxford Nanopore Technologies](#), headquartered in Oxford Science Park with global operations in China and the USA, is developing portable devices for real-time molecular analysis and has launched a mobile phone-sized DNA sequencer – the MinION. Oxford Nanopore is working with a number of public health laboratories, in China and elsewhere, to support the rapid sequencing of the novel coronavirus (COVID-19).

[Intuitive Surgical](#), a global pioneer of robotic-assisted surgery has UK headquarters at Oxford Science Park providing educational and training programmes on minimally invasive care.

Abbott Diabetes Care
FreeStyle Libre reader
& sensor

[Adaptix](#), based at Begbroke Science Park and Harwell Campus, is developing the next generation of 3D X-ray imaging. They are aiming to reduce the cost of introducing the technology, increasing adoption across the world and improving portability.

Oxfordshire has considerable capability in the field of complex sensor technology with companies including [Bartington Instruments](#) which along with other markets, serves the medical sector with its measuring instruments used to monitor magnetic fields surrounding sensitive instrumentation used in medical equipment.

LEADING ADVANCES IN...

ARTIFICIAL INTELLIGENCE

Oxfordshire is a global driver of Artificial Intelligence research, driving innovation in drug discovery, diagnostics and precision medicine.

[Innovate UK](#) and industry are investing more than £17.5 million in developing Artificial Intelligence (AI) healthcare applications with the [University of Oxford](#)¹. Led from Oxford's [Big Data Institute](#), the [National Consortium of Intelligent Medical Imaging](#) (NCIMI) is funded by the UK Government's [Industrial Strategy Challenge Fund](#) to drive innovation in the use of artificial intelligence for improved diagnosis and delivery of precision treatments for cancer, heart disease, genetic disorders and other conditions. NCIMI aims to build a pipeline for innovation to allow new clinical imaging AI tools to be developed.

AI companies that have successfully spun out from Oxford University focused on healthcare include [Brainomix](#), [Caristo Diagnostics](#), [Mirada Medical](#), [Optellum](#), [Perspectrum Diagnostics](#) and [Plexalis](#).

[Ultromics](#), another Oxford University spin out, has developed a unique AI-based ultrasonic diagnostic support solution for coronary artery disease. With support from [Oxford Sciences Innovation](#) (OSI), the company has raised £10 million in funding and its AI platform is now being trialled in 20 NHS hospitals.

In 2019, [Sensyne Health](#) announced a [3 year collaboration](#) with the [Big Data Institute](#) to establish a world-leading research alliance to develop and evaluate the use of clinical artificial intelligence and digital technology to understand the complexities of chronic disease.

The newly established [Rosalind Franklin Institute](#) centred at [Harwell Campus](#) will pioneer disruptive technologies including AI and robotics to accelerate drug discovery and develop new diagnostics. The centre will be the base for the world's first automated discovery facility to produce drugs up to ten times faster transforming the UK's pharmaceutical industry.

In December 2019, [Arctoris](#) opened its new global headquarters and state-of-the-art research and development facility at Milton Park. Originating from Oxford University in 2016, Arctoris has established the world's first fully automated, robotic laboratory dedicated to accelerating drug discovery and generating datasets for AI modelling.

Oxford-based firm Exscientia, that uses AI to develop new medicines, announced in March 2020 it is working with the UK's national synchrotron facility, Diamond Light Source, to screen more than 15,000 drugs for their effectiveness as a treatment for Covid-19.

LEADING ADVANCES IN...

DIGITAL HEALTH

Oxfordshire and its hinterland has over 160 digital health companies and 430 stakeholder organisations² across industry, academia, the National Health Service (NHS) and the third sector. This region is a potential major growth cluster for developing and demonstrating high income, technology-based healthcare solutions.

Digital technologies can transform healthcare, from prevention through diagnosis and intervention, to ongoing monitoring. The UK market for digital health is expected to grow to £4 billion by 2022, driven primarily by high growth in cloud-based services and delivery models.

Oxfordshire's digital health space is supported by a number of networks including [Digital Oxford](#), and specifically [Digital Health Oxford](#).

[TheHill](#) is a digital health innovation community working in Oxford with NHS Trusts, universities, digital developers, innovators and investors to catalyse commercial and impactful technological solutions in healthcare. Their in-house team provides a bespoke programme of support interventions for SME's developing a healthcare innovation with a digital component.

[Smart Oxford](#) and two centres under the [NHS Healthy New Towns initiative](#) - Bicester and Oxford (Barton) are test beds for the use of smart technologies and the built environment, with the aim to engender Digital Health in Oxfordshire.

[Cognitant](#) has developed methods of displaying visual and interactive health information in 3D for patients to view on their own smartphones, tablets, computers or using virtual reality headsets. This enables health practitioners to convey complex information clearly and effectively through visuals.

Over 9,000 students are enrolled at the University of Oxford in courses that are of direct relevance to digital health and the Nuffield Department of Primary Care Health Sciences has research teams investigating and evaluating the effectiveness of digital tools.

ACCESSING OPPORTUNITIES TO COLLABORATE WITH THE NHS

[Oxford University Hospitals NHS Foundation Trust](#) is a world renowned centre of clinical excellence and one of the largest NHS teaching trusts in the UK. The Trust is made up of four hospitals - [John Radcliffe Hospital](#), the [Churchill Hospital](#) and the [Nuffield Orthopaedic Centre](#), all located in Oxford, and the [Horton General Hospital](#) in Banbury.

Oxford University Hospitals is open to collaborating with industry on research projects which aim to improve patient care. The partnership between Oxford University Hospitals and the University of Oxford allows industry-led commercial trials to be undertaken with the input of clinicians, academics, patients. Through the streamlined services provided within the [Joint Research Office](#), companies can access world leading facilities, resources and expertise.

The [Oxford Health NHS Foundation Trust](#) manages community hospitals and clinics across Oxfordshire, Wiltshire, Buckinghamshire and North East Somerset, serving a population of approximately 2.5 million people. The Trust's R&D department runs on average 100 research studies at one time including highly complex clinical trials. The NIHR Biomedical Research Centre is a partnership between [Oxford Health NHS Foundation Trust](#) and the [University of Oxford](#) and is committed to translating innovative research into better treatments for mental health disorders and dementia.

A key source of business support for companies wishing to access research and clinical expertise is the [Oxford AHSN](#), one of 15 Academic Health Science Networks covering the country. It covers a population of 3.3 million and is a partnership bringing together universities, industry and the NHS.

Led by teams of specialist clinicians, Oxford AHSN is recognised as a leader in its field and can effectively help companies set up in the area and build connections between the NHS, research and business to enable companies to get their product to market more quickly and effectively.

Oxford AHSN can help develop businesses develop links with key NHS and research assets in the county.

FORGING PARTNERSHIPS BETWEEN INDUSTRY AND ACADEMIA

[Oxford University Innovation](#) is a technology transfer and consultancy company created to manage the research and development of Oxford University's spin-offs. OUI offers investors the opportunity to invest in new companies and has created over 100 spin-outs to date. The Consulting Services team provides businesses access to over 5,000 academic and research staff and the state of the art testing and analysis facilities that underpin Oxford's world class research.

[Oxford Sciences Innovation](#) (OSI), a £600m investment fund, is the largest for spin-outs in Europe. OSI provides capital and scaling expertise to businesses driven by intellectual property developed in Oxford University's Mathematical, Physical, Life Sciences Division and Medical Sciences Division, with a core ambition to bring the very best of the University's scientific research to the market.

[LAB282](#) is a ground breaking £13m collaboration between Oxford University, the global drug discovery company [Evotec](#), and [Oxford Sciences Innovation](#). The partnership provides industrial expertise and funding to help translate innovative, world class, biomedical discoveries at Oxford University into next generation drug discovery programmes that can be commercialised for patient benefit.

[Oxford Investment Opportunity Network \(OION\)](#) is a business angels network for investors and private companies interested in investing in spinout companies from the University of Oxford. Members receive business proposals from spinouts looking for funding and invitations to events where private individuals and companies can meet, discuss and invest in the early stages of a Oxford University spinout company.

Oxford University's [Industrial Partnerships Team](#) and [Medical Sciences Business Development Team](#) work together to establish, build and support strong research collaborations between industry partners and academia.

[Oxford Brookes' Faculty of Health and Life Sciences](#) welcomes businesses as researcher collaborators and access to specialist services through its [Innovation and Knowledge Exchange](#). The [Bioinnovation Hub](#) offers facilities and resources for startup biotech companies.

OUR INNOVATION POWERHOUSES...

OLD ROAD CAMPUS

The University of Oxford's Old Road Campus is home to much of the institution's world-leading clinical medical research and is close to Oxford's hospitals. The campus provides a powerful mix of state-of-the-art research, innovative start-ups and pharma.

The Old Road Campus is home to the [Churchill Hospital](#) including its £100m cancer hospital, [The Wellcome Trust Centre for Human Genetics](#), the Richard Doll Building (housing epidemiological studies and clinical trials services), the [Nuffield Department of Medicine Research Building](#), the [Oxford Bioescalator](#), [Target Discovery Institute](#) and [Big Data Institute](#).

The University's Old Road Campus Research Building (ORCRB) facilitates collaboration between renowned specialists in cancer and is at the heart of the University of Oxford's world-leading biomedical research. The University's long-standing partnership with local hospitals enables the close integration of science and medical care. In addition to the [Ludwig Institute for Cancer Research](#), units within the ORCRB include:

- [Structural Genomics Consortium](#)
- [Department of Oncology](#)
- [Jenner Institute](#)
- [Institute for Biomedical Engineering](#)

The campus also has close links and convenient access to Oxford's science area, the [Weatherall Institute for Molecular Medicine](#) and the [John Radcliffe Hospital](#).

OXFORD BIOESCALATOR

The [BioEscalator](#) provides lab space and support for early-stage high-potential medical science companies emerging from the University's medical research groups and other start-ups attracted by the proximity to world-leading researchers and facilities.

Located on University of Oxford's Old Road Campus, the BioEscalator is funded by the Government's City Deal and the University of Oxford, and shares the Innovation Building with Novo Nordisk's Research Centre Oxford.

It offers dedicated labs for start-ups with shared facilities, knowledgeable staff and a burgeoning entrepreneurial community. Designed for small and growing medical science businesses, it places an emphasis on flexibility and support - entrepreneurs can start with just one lab bench in a shared lab and move to a private lab as they grow. It is also a hub for entrepreneurial biosciences through organising and hosting events aimed at increasing the collaboration between researchers at the university, companies of all sizes and the wider innovation ecosystem.

The facility opened its doors in September 2018 and filled quickly with rapidly-growing tenants, who have already attracted £43.2M investment since they moved in, with further rounds of funding planned by all companies. There are currently 13 companies in residence, employing 75 people, the majority of whom are scientists. The companies' science is tackling a wide range of diseases through the development of novel diagnostics, therapeutics and platform technologies. Nearly one third of the CEOs are women.

Building on the success of the BioEscalator, the University of Oxford's Medical Sciences Division is now starting to plan a second, larger facility to support additional start-ups over a longer period of growth.

HEALTHTEC AT HARWELL

Harwell Campus brings together UK's strengths in the physical sciences, engineering and life sciences, industry, academia and Government, to create a truly cross disciplinary and collaborative environment.

Businesses can leverage the Harwell Campus ecosystem, including a comprehensive suite of open access facilities, including X-ray and Electron Microscopy imaging at the Diamond Light Source, novel fluorescence imaging at [Central Laser Facility](#) and 'super microscopes' [ISIS Neutron and Muon Source](#).

The 300 hectare science, innovation and business campus boasts Grade A office and laboratory spaces from 300 to 20,000 sq ft are available in comprehensively remodelled buildings, complemented by first class amenities, including nurseries, sports facilities and attractive public spaces.

Harwell is already home to a thriving cluster of innovative companies across a broad spectrum of emerging pharmaceutical/biotech, medtech, diagnostic, digital health, as well as organisations that research and inform on public health.

Harwell is host to the UK's world-leading national physical sciences laboratories representing an investment of over £2 billion to date.

Recent developments include the [Rosalind Franklin Institute](#), [Agilent Spectroscopy Site](#), [Nucleic Acid Therapies Accelerator \(NATA\)](#), [Extreme Photonics Applications Centre \(EPAC\)](#) and the [Vaccine Manufacturing Innovation Centre](#).

Harwell Science and Innovation Campus has been designated as a Life Sciences Opportunity Zone until 2030, building on the investment made as part of the Life Sciences Sector Deal.

**OVER 25,000
PEOPLE IN LIFE
SCIENCES AND
HEALTHCARE**

Employees in these sectors represent 5.6% of the population¹.

A SKILLED AND EXPERIENCED WORKFORCE

Access to a wide pool of skilled employees, including the products of Oxfordshire's higher and further education institutions:

The [Medical Sciences Division](#) at the [University of Oxford](#) is an internationally recognised centre of excellence for biomedical and clinical research and consists of over 5,600 academics, researchers, clinicians, general practitioners and administrative staff, 1,600 graduates and 1,700 undergraduate students.

[Oxford Brookes University](#) runs foundation and degree courses including in Biomedical Science, Medical Science and Life Sciences Foundation as well as postgraduate courses in Medical Genetics and Genomics.

[Abingdon and Witney Further Education College](#) offers a Life Sciences Foundation degree and a Medical Sciences extended Diploma.

[UTC Oxfordshire](#) (ages 14-19) has specialisms in science, including life sciences and engineering. Its industry partners include [Vertex](#) and [QBN](#).

Potential investors can access further labour market reports and insights and explore their specific skill requirements by contacting the OxLEP Inward Investment team.

¹ Business Register and Employment Survey 2018, ONS

Bushra Nawaz is completing a Level 3 BTEC in Applied Science apprenticeship with the BioEscalator, part of the University of Oxford. Her two year apprenticeship will conclude in July 2020.

NURTURING THE SCIENTISTS OF THE FUTURE

"I've always been a very hands-on person so the opportunity for a practical form of learning whilst in the workplace was something that naturally appealed to me when considering my post A-Level options. Being paid to "earn while you learn" was also a big draw compared to all of the costs associated with attending university.

"Too many people have this idea that you need to go to university to succeed and some of my friends were initially sceptical of my choice to pursue an apprenticeship. However, now they've seen what I've been doing they appreciate that there is more than one route for young people. The sheer amount of frontline exposure that I've managed to get is something that you would really struggle to get in a university environment and all too often you hear of people struggling to find jobs post-degree because they lack relevant accompanying experience. Once I've finished my apprenticeship I'd like to explore degree options in Biomedical Science to continue my development.

"One of the best things has been being able to observe and participate in science in a real applied environment. For example, I've been working with Hutano Diagnostics, a startup based at the BioEscalator that is developing a rapid diagnostic for the Ebola virus. Alongside other members of their team I helped complete crucial foundational work in the lab to help them complete initial studies that will form the basis for further research.

"I think apprenticeships also offer lots to employers. They can take someone straight out of school and mould them so that they have the skills and attitudes that fit neatly within their organisation. More companies working in science need to explore their potential – there were very few opportunities on offer when I was applying for an apprenticeship.

"It has been amazing working alongside so many specialists from a diverse range of backgrounds – everyone has forged their own path to success. I'm so lucky to be in a STEM workplace, learning alongside some fantastic female role models – they're always encouraging me and it's great to see the variety of ways my career could develop in the future."

A VIBRANT AND DIVERSE PLACE TO LIVE

10 REASONS TO LIVE IN OXFORDSHIRE

Communities steeped in history: The UNESCO World Heritage site at Blenheim Palace, Oxford's dreaming spires, and Banbury Cross of nursery rhyme fame are just a few of the landmarks dotted around the county.

Beautiful outdoor spaces: Many towns and villages sit within the Cotswolds, North Wessex Downs and Chilterns Areas of Outstanding Natural Beauty, and rivers and canals add to the landscape and host water-based activities.

Fast and convenient public transport: Fast trains to London and Birmingham are available from Oxford and many of the larger towns, and smaller communities often benefit from commuter services. A comprehensive bus network covers Oxford linking it with smaller nearby settlements.

A fusion of traditional and modern living: The historic streets of Oxford and thatched cottages in rural hamlets don't mean you have to live in the past - 97% of properties benefit from fibre broadband.

Museums and culture: A wide range of museums, galleries and theatres means you are never short of cultural opportunities to explore, including the Ashmolean Museum in Oxford and several National Trust properties.

Oxfordshire is home to 687,500 people of which 375,100 are economically active¹

Retail therapy: The new Westgate shopping centre in the centre of Oxford and Bicester Village offer a wide range of global brands alongside exceptional dining and leisure facilities. Small independent traders can be found on many high streets, offering boutique products manufactured locally and from further afield.

Excellent educational opportunities: In addition to the two universities, there are many fantastic schools in the state and private sector, ensuring choice for all.

Safe and welcoming communities: Newcomers are welcomed by communities with many people willing to offer help and advice, and the county also benefits from very low levels of crime.

Literary, TV and film connections: Home to filming locations for productions including; Inspector Morse, Harry Potter, His Dark Materials and Downton Abbey. The annual Oxford Literary Festival celebrates world-class writers in the city of Lewis Carroll, CS Lewis, JRR Tolkien and Phillip Pullman.

Gastronomical delights: From high end cuisine offered by Michelin starred restaurants to a pint of locally brewed Hooky poured in the village pub, there is no shortage of fantastic places to eat and drink.

Unemployment is at 1.6% which is significantly below the national average of 3.9%¹

¹ Labour Market Profile 2018, ONS

COMPREHENSIVE SUPPORT FOR INVESTORS

SUPPORT FOR BUSINESSES INVESTING IN OXFORDSHIRE

Oxfordshire Local Enterprise Partnership (OxLEP) provide comprehensive tailored assistance to companies from across the world in establishing their new operation in the area as well as providing on-going support. The range of support provided by the [Inward Investment](#) team includes:

- Co-ordination and identification of commercial premises and property viewings
- Facilitation of introductions to the University of Oxford and Oxford Brookes University

- Introduction to Oxfordshire's science and research facilities
- Connecting businesses with professional service providers, signposting to business support organisations and sector specific networks.
- Assistance in recruitment of new staff, such as graduate recruitment and training support including apprenticeships
- Supporting the relocation of employees and their families moving into the area
- Provision of ongoing aftercare to Oxfordshire based companies

CASE STUDIES

NOVO NORDISK RESEARCH CENTRE OXFORD

Delivered in collaboration with the University of Oxford

[Novo Nordisk Research Centre Oxford](#) (NNRCO) is one of the company's four transformational research units. The target discovery and translational research unit is focused on identifying innovative therapies for patients with type 2 diabetes and cardiometabolic diseases.

The project brings together Novo Nordisk's 90 years' experience in developing treatments for diabetes with the research expertise of the University of Oxford. Up to 100 researchers employed at the centre will combine industrial and academic knowledge to develop the next generation of type 2 diabetes treatments.

The Novo Nordisk – Oxford Fellowship Programme operates in partnership with the University of Oxford, supporting the development of the next generation of diabetes and metabolism researchers and advancing scientific excellence within diabetes and cardiometabolic diseases.

Oxfordshire was chosen as the location for this facility due to the existing life science ecosystem and the collaborative opportunities with the University of Oxford.

A new £115m global research centre in Oxford

INTUITIVE SURGICAL

A new UK headquarters for robotic- assisted surgery pioneer

[Intuitive Surgical](#)'s new facility provides educational and training programmes alongside showcasing the company's range of products and services.

The global leader in minimally invasive care and the pioneer of robotic-assisted surgery chose Oxford Science Park to take advantage of existing ecosystems, allowing the company to collaborate with international experts in engineering, science and clinical environments.

Over the past 18 months Intuitive has doubled their personnel and is expected to grow further following ever wider adoption of their innovation systems.

OxLEP, working alongside the Department for International Trade, assisted Intuitive Surgical with their relocation, initially providing background information and then facilitating visits to several sites. Introductions to related companies were also organised to ease Intuitive Surgical's integration into the existing local ecosystem.

Opened in September 2019

AGILENT

A new state-of-the-art facility in Oxfordshire for spectroscopy

[Agilent](#) is a global leader in life sciences, diagnostics and applied chemical markets. They supply laboratories with instruments, services, consumables and applications.

In October 2019, Agilent opened their new spectroscopy research and development hub at Harwell Innovation Campus in Oxfordshire. The site is focused on molecular analysis through laser spectroscopy and accommodates the company's Laser Spectroscopy Centre of Excellence.

The new facility incorporates Agilent's Raman Spectroscopy business, known as Cobalt Light Systems prior to their acquisition in 2017. Cobalt Light Systems began as a 2008 spin-out from the UK Science and Technology Facilities Council.

In their announcement of the new facility, Phil Binns, vice president, and general manager of Agilent's Spectroscopy division explained why they chose Harwell Campus in Oxfordshire - "Our new flagship site will enable us to develop a truly unified approach to vibrational spectroscopy. The location will also facilitate greater collaboration with internationally acclaimed academic and scientific thought leaders based at this premier UK hub of scientific innovation."

Opened in September 2019

OXFORD BIOMEDICA

A top spin-out of the University of Oxford

[Oxford BioMedica](#) is a specialist in the development and commercialisation of innovative gene-based medicines. It employs more than 430 and had developed a series of international partnerships, including with Novartis, Axovant Gene Therapies, Microsoft and Boehringer Ingelheim.

The company has established platform technologies in gene delivery and immunotherapy with numerous applications including in cancer treatment, Parkinson's disease and ophthalmology.

Since its foundation, Oxford Biomedica has rapidly expanded its operation, with four dedicated facilities within the county. Their new 84,000sq ft facility features extensive office space and warehousing, and additional clean room and laboratory space. This will allow the group to target 25% to 30% of the global lentiviral vector bioprocessing market (excluding milestones and royalties).

Established in 1995
